

IDEAL LIFE Medication-Manager™

Never forget to take your medication again

FOR USERS

- Easy setup, just plug in the power source and you are ready
- Completely wireless, no phone line, computer or internet required
- Organizes all of your medications
- Affordable, small enough to fit on the kitchen counter
- Reminds you to take medication using lights and sound
- Able to trigger phone reminders
- Notifies your caregiver of medication adherence/compliance

Take medication

- a. Information is automatically saved and transmitted to a secure information management system
- b. No need for a personal computer; cumbersome wires or manual data entry

Receive Feedback from Caregivers

- a. A healthcare team, which may include physicians, nurses and/or family members, can access the information and assist with healthcare decisions

FOR CAREGIVERS

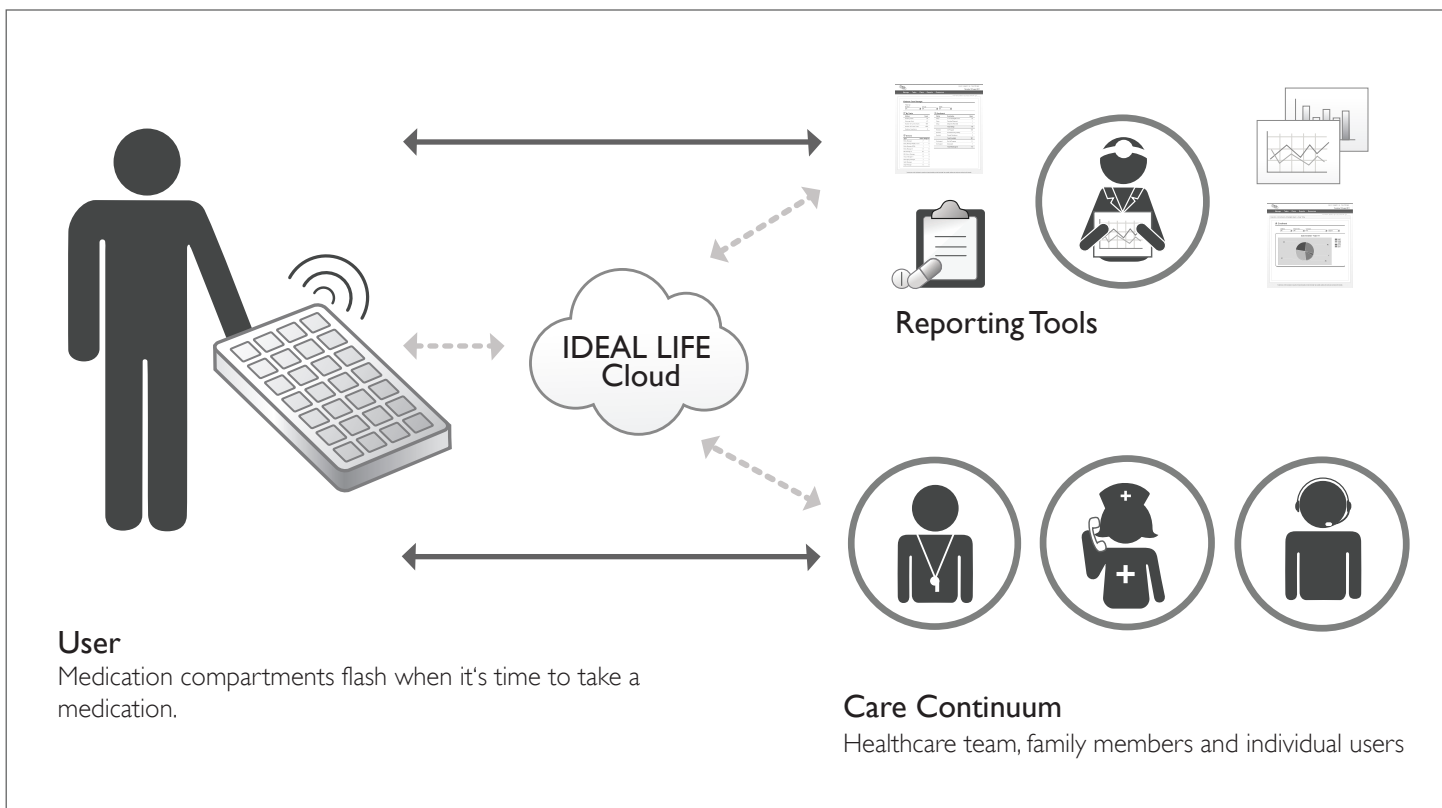

- Completely flexible scheduling of medications
- Notification of missed medication compliance
- Remotely monitor user
- Remotely configure the dispenser
- Fully integrated into the IDEAL LIFE information management platform for correlation of biometric reading data
- Refillable trays by caregiver or may be shipped to user (single or multi-dose)

Two convenient re-filling options:

- 1) Simply lift the lid, which opens all 28 compartments, allowing the caregiver or patient to place the medications in the proper cups.
- 2) Pre-filled tray: Pre-filled trays are available by IDEAL LIFE pharmacists. This feature greatly reduces the risk of medications errors and ensures all compartments are correctly filled.

IDEAL LIFE Medication-Manager™

HOW IT WORKS

Simply plug the manager into a wall outlet, fill it with the patients medications and set up the medication schedule.

When it's time to take the medication, the appropriate compartment will flash. If the cup is not removed within an assigned time frame, the patient may also receive auditory prompts.

Additionally, the manager is capable of having automatic phone calls, text message and emails sent to the user, a family member or a caregiver.

The IDEAL LIFE Medication Manager™ sends records of patients' medication activities in real-time to the caregiver via the IDEAL LIFE Information management system. The caregiver can then access this information via the Internet or receive real-time email or text messages notifications.
